SKILLS

Languages
Python, SQL, R, Bash, C/C++

AI / ML
Deep Learning, NLP, LLMs,
Agent Systems, RAG,
PyTorch, Scikit-learn

Data & Imaging
Pandas, NumPy, ETL & ML
pipelines, multi-site data
harmonization, MRI/fMRI

Cloud & Systems
Microsoft Azure, GCP,
Docker, Linux/Unix, Git,
HPC, Slurm

Clinical & Regulatory
Clinical AI validation,
IRB development,
study design, scientific writing,
clinical usability studies

EDUCATION

Ph.D. Biomedical Informatics
University of Pittsburgh
School of Medicine
2020 – 2024

B.S. Bioinformatics & Computational Biology
2015 – 2019
University of Maryland
Baltimore County

B.A. Mathematics
2015 – 2019
University of Maryland
Baltimore County

WORK EXPERIENCE

Senior Data Scientist 2025 – Present
Mayo Clinic *Remote – Baltimore, MD*

- Led end-to-end design, evaluation, and deployment of LLM-based clinical AI systems across Azure, GCP, and local environments, supporting real-world clinical workflows.
- Directed evaluation of Microsoft Healthcare Agent Orchestrator (HAO), establishing quantitative and clinician-informed frameworks to assess clinical utility.
- Extended Microsoft HAO within Mayo Clinic’s ANIMATE platform by adding new agent capabilities, functionalities, and system-level improvements for clinical use.
- Collaborated with multidisciplinary teams (physicians, engineers, product, and external partners) to translate clinical requirements into deployable AI system designs.
- Partnered with Microsoft to deploy and validate HAO and Diagnostic Orchestrator (DxO) within enterprise clinical environments.
- Defined evaluation metrics and study designs to assess AI impact in real-world clinical settings, supporting regulatory and validation efforts.
- Provided consultative guidance to clinical teams on AI capabilities, limitations, and implementation strategies.
- Authored 3 IRBs, 1 peer-reviewed paper, and 2 conference abstracts supporting clinical AI development.

Health Informatics Scientist 2025
Henry M Jackson Foundation *Bethesda, MD*

- Designed a framework to harmonize heterogeneous research datasets into a centralized data lake, enabling downstream machine learning and analytics.
- Led cross-disciplinary discussions with physicians, psychologists, and researchers to define requirements for data storage, integration, and longitudinal tracking.
- Consulted on software and hardware requirements to support deployment of research and analytics infrastructure.
- Appointed to Walter Reed Hospital with Interim DOD Secret level Clearance.

PhD Research Assistant 2020 – 2024
Children’s Hospital of Pittsburgh *Pittsburgh, PA*

- Developed open-source command-line software using Bash, Python, and Docker.
- Developed, trained, and evaluated machine learning models (e.g., Random Forests, CNNs) to identify imaging-based predictors of clinical outcomes from large-scale medical datasets.
- Designed, implemented, and deployed MRI preprocessing pipelines to enable data-driven analysis while ensuring data quality and clinical validity.
- Trained deep learning models on Google Cloud Compute Engine and HPC clusters.

Software Engineer 2019 – 2020
Hughes Network Systems *Gaithersburg, MD*

- Developed real-time C/C++ software for satellite communication, modems, and network protocols.
- Maintained Jenkins pipelines for automated unit testing and CI/CD.

Bioinformatics Research Assistant 2017 – 2019
Univ. of Maryland Baltimore County *Baltimore, MD*

- Led development of C/C++ software for biological data curation, contributing to a peer-reviewed publication (*Bioinformatics*, 2020).

PUBLICATIONS

- **Roy J** et al. Functional network organization is locally atypical in children with congenital heart disease. *NeuroImage: Clinical*. 2026.
- **Roy J** et al. Limbic pathway vulnerability associates with neurologic outcome in children after cardiac arrest. *Resuscitation*. 2023.
